Everstart smart charger

176 0xB0 Erase Fail Count The number of flash erase command failures. ID Hex Name Description 01 0x01 Read Error Rate Total read errors that occurred while reading data from the drive. 193 0xC1 Load Cycle Count or Load/Unload Cycle Count The number of load/unload cycles into head landing zone position. Slower amperage charges also prolong the battery's life. If problems were detected by S.M.A.R.T., they'd be displayed in this window. For instance, if charging a 12-volt battery, select 12-volt and the amperage charge, if charging a 6-volt battery, slide the button to the 6-volt setting. All recent hard drives and SSDs (solid-state drives) should already have S.M.A.R.T. To access the S.M.A.R.T. information or see your drive statistics, see the following section. Place the battery charger as far away as possible from the battery, at least the distance of the charger's cables. Set the cable aside. 204 0xCC Soft ECC Correction The number of errors corrected by internal error correction software. At that time, S.M.A.R.T. was referred to as Predictive Failure Analysis. Portable chargers let you charge on the go, whether you're commuting to work, hitting your favorite local trails or enjoying a weekend getaway. 185 0xB9 Head Stability Western Digital attribute. 212 0xD4 Shock During Write The number of socks encountered during write operations. Ensure your battery will accept a charge before proceeding. This technology was initially developed for IBM mainframe drives to give advanced warning of drive failures. 244 0xF4 Total LBAs Read Expanded The number of upper 5 bytes of the 12-byte total numbers of LBAs read. Everstart chargers, which are no longer being manufactured, are older battery chargers that come in different models. MORE FROM CONSUMERSEARCH.COM Batteries can generate explosive hydrogen gases when charging, so it's important to understand how to use the Everstart 12-amp car battery charger correctly. 196 0xC4 Reallocation Event Count The number of remap operations. These utilities can show you all drive information, including the S.M.A.R.T. information. Replace the caps. 197 0xC5 Current Pending Sector Count The number of unstable sectors because of unrecoverable read errors. Some are made specifically for charging boating and recreational vehicle batteries, car batteries, farm equipment and motorcycle batteries, while others are made for charging any battery type. 192 0xC0 Power-off Retract Count, Emergency Retract Cycle Count or Unsafe Shutdown Count The number of power-off or emergency retract cycles. 189 0xBD High Fly Writes The number of high fly writes being done by the recording head outside of the normal operating range. 202 0xCA Data Address Mark Errors or TA Counter Increased or Percentage Lifetime Used The number of data address mark errors. Repeat for the positive battery post and cable. 05 0x05 Retired NAND Blocks or Reallocated Sectors Count The number of retired NAND blocks that are no longer used by SSD. When referring to software, smart or intelligence is an ability of a program to function with little or no human interaction. 211 0xD3 Vibration During Write The count of vibrations encountered during write operations. 240 0xF0 Head Flying Hours or Transfer Error Rate The total time spent positioning the drive heads. 07 0x07 Seek Error Rate The rate of seek errors of the magnetic heads. 205 0xCD Thermal Asperity Rate The number of errors due to high temperature. Slide the switch to a 2-amp charge or "trickle" charge, as this is the most effective means of charging your battery. Smart is part of the hard drive's firmware and is not something you can download. 210 0xD2 Vibration During Write or RAIN Successful Recovery Page Count Maxtor attribute for the number of vibrations detected during write. Unplug the Everstart battery charger and remove the charger cables from the battery, ensuring not to touch the cables between both posts. 2. 177 0xB1 Wear Range Delta Delta between the most-worn and least-worn flash blocks. 10 0xA0 Spin Retry Count The number of spin start retry attempts that have happened for a drive to reach fully operational speed. 171 0xAB SSD Erase Fail Count Number of flash program operation failures. It will take longer to charge, however, it is the safest means of charging a battery. 03 0x03 Spin-Up Time The average spindle spin up time in milliseconds. 209 0xD1 Offline Seek Performance The drive's seek performance during testing. 227 0xE3 Torque Amplification Count The number of attempts to compensate for platter speed variations. As the battery charges, the amperage will return to "0." Because the battery charger will not shut off, you will need to pay attention to the dial on the battery charger. Photo Courtesy: Anker/YouTube From smartphones to tablets, it's rare to have your favorite devices last an entire day without needing to recharge. When the charger is done charging, it will automatically quit charging the battery. Further information can be obtained by reading each of the S.M.A.R.T. attribute values mentioned in the next section. 11 0xB Recalibration Retries The number of times recalibration was requested. If low, add distilled water to the battery until the water reaches the bottom of where the cap inserts. 181 0xB5 Program Fail Count Total or Non-4K Aligned Access Count The number of flash program operation failures. 02 0x02 Throughput Performance Overall throughput performance of the drive. 234 0xEA Average erase count and Maximum Erase Count Bytes 0-2 are the average erase count, and bytes 3-5 are the maximum erase count. Plug in the battery charger, but don't turn it on. 195 0xC3 Hardware ECC Recovered Vendor-specific attribute. 201 0xC9 Soft Read Error Rate or TA Counter Detected The number of uncorrectable software read errors. 248 0xF8 FTL Program Page Count Crucial attribute for the number of FTL Program NAND pages. 186 0xBA Induced Op-Vibration Detection Western Digital attribute. Turn the battery charger on. Attach the negative or black cable to the engine's frame. 200 0xC8 Multi-Zone Error Rate The number of errors when writing a sector. Adjust the amperage and volt settings to match the battery before charged. 247 0xF7 Host Program Page Count Crucial attribute for the number of Host Program NAND pages. 173 0xAD SSD Wear Leveling Count The maximum erase count on a block. 172 0xAC SSD Erase Fail Count The Number of flash erase failures. While the S.M.A.R.T. technology can detect upcoming issues, not all hard drive failures are predictable. With hardware, smart describes any hardware device with more than basic abilities. Some batteries are maintenance-free and require replacement rather than charging. 208 0xD0 Spin Buzz The count of buzz routines needed spin up the drive because of insufficient power. Based on this diagnostic, Compaq announced IntelliSafe, which was submitted to the ATA/IDE standards committees, and the resulting standard was named S.M.A.R.T. S.M.A.R.T. analyzes many mechanical attributes; over time, some failures can be predicted by detecting if the hard drive is moving out of tolerance. Attach the charger's red cable to the positive battery post identified with a "+" near the battery post. Identify the negative battery post on the battery -- it is the post marked "-." Detach the vehicle's negative cable using an appropriately sized open-end wrench. 224 0xE0 Load Friction The total of resistance caused by friction in mechanical parts while operating. An Everstart battery charger will bring your battery back to life, if the battery has undamaged cells and will accept a charge. 232 0xE8 Endurance Remaining or Available Reserved Space The percentage of physical erase cycles completed with the maximum physical erase cycles the drive is designed to endure. Drives made before 2010 may use this section for the temperature. 190 0xBE Temperature Difference or Airflow Temperature Value that is 100° C minus the temperature for manufacturers to set a threshold to a maximum temperature. Turn the charger off. 233 0xE9 Media Wear out Indicator or Power-On Hours Wear out indication for Intel SSDs with a value of 100 indicating a new drive. This value should be 0 or a low value depending on the age of the drive. In the example picture above, the software shows the S.M.A.R.T information and that the drive is in good health. The Percentage of lifetime of the drive used. 183 0xB7 SATA Downshift Error Count or Runtime Bad Block The number of downshifts of link speed or number of data blocks with detected, uncorrectable errors. 199 0xC7 UltraDMA CRC Error Count The number of errors in data transfer via the interface cable. Follow Steps 1 through 7 in the previous section to hook up the manual battery charger. What type of information can S.M.A.R.T. show? Bytes 4-5 = Overall number of tests. 251 0xFB Minimum Spares Remaining The number of remaining spare blocks as a percentage of the total number of spare blocks available. 04 0x04 Start/Stop Count The count of start/stop cycles done by the hard drive spindle. For example, a Smart TV describes a TV that connects to the Internet and uses services like Netflix. AI, Computer acronyms, Dumb, Hard drive terms However, we've also highlighted in red the important IDs to view when trying to find problems with a hard drive. Review the amps section of the dial to determine how many amps the battery is accepting. 221 0xDD G-Sense Error Rate The number of errors resulting in external shocks and vibrations. 220 0xDC Disk Shift The distance disk has shifted relative to the spindle. The count of reallocated sectors that were remapped because of bad sectors. 206 0xCE Flying Height or Write Error Rate The height value of heads above disk surface or the rate of errors. The picture below shows an example of a S.M.A.R.T. error indicating the status of the Primary (master) hard drive is bad. The best method of accessing all S.M.A.R.T information is to use a drive management utility from your hard drive manufacture. 226 0xE2 Load 'In'-time The total time of loading on the magnetic head actuator and not in the park position. Reattach the vehicle's negative cable to the battery's negative post first using an appropriately sized open-end wrench and then reattach the positive cable. 225 0xE1 Load/Unload Cycle Count The number of load cycles. For hardware to gain these abilities, the devices often have code programmed into the firmware of the device. 22 0x16 Current Helium Level With helium drives, displays measurement of helium inside the drive. 174 0xAE Unexpected Power Loss Count The number of unclean shut downs. Remove the battery maintenance caps from the battery and check the battery's fluid levels. 188 0xBC Command Timeout The number of aborted operations due to a hard drive timeout. 243 0xF3 Total LBAs Written Expanded The number of upper 5 bytes of the 12-byte total numbers of LBAs written. Do not attach the negative cable to the carburetor, fuel lines or sheet metal on the vehicle. 242 0xF2 Total LBAs Read The total count of LBAs read. Most hard drive and SSD manufacturers include the S.M.A.R.T. Technology in their hard drives, including Crucial, IBM, Western Digital, Maxtor, Quantum, Seagate, and Fujitsu. 08 0x07 Seek Time Performance The overall average of seek operations of the magnetic heads. 06 0x06 Read Channel Margin The margin of a channel while reading data. 203 0xCB Run Out Cancel The number of errors caused by incorrect checksum during the error correction. 179 0xB3 Used Reserved Block Count Total Samsung attribute. Value decreases with the NAND erase cycles. 252 0xFC Newly Added Bad Flash Block The number of bad flash blocks the drive has detected. Everstart chargers equipped with a 12-amp charge capacity will also have the ability to set the amperage at a lower, "trickle" charge and "medium" charge setting. Tip Most S.M.A.R.T. utilities automatically review all important IDs to give you a good or bad health indication. 223 0xDF Load/Unload Retry Count The number of times head changed position. 249 0xF9 NAND Writes (1GiB) The total NAND writes. 198 0xC6 (Offline) Uncorrectable Sector Count The number of uncorrectable errors when reading/writing a sector. These types of batteries require replacement. Unplug the charger when the amperage reaches "0." If the battery will not accept a charge after first turning on the battery charger, and it continues to read "0" amps, the battery has dead cells and will require replacement. 09 0x08 Power-On Hours The number of hours the hard drive has been in a powered on state. The basic difference between the two battery types is that a maintenance-free battery is a sealed battery with no way to refill the battery with water. 194 0xC2 Temperature or Temperature Celsius Enclosure temperature in Celsius degrees. 187 0xBB Reported Uncorrectable Errors The number of errors that could not be recovered using hardware ECC. Most chargers work with Apple and Android products and are often able to charge at least two devices on the go. With Intel drives, the value of available reserved space of the initial reserved pace. Older drives may use this section to indicate the number of hours the drive has had power. Short for Self-Monitoring Analysis and Reporting Technology, S.M.A.R.T., or SMART, is a diagnostic method originally developed by IBM and introduced with the ATA-3 specification. 3. 222 0xDE Loaded Hours The total time the drive has spent operating under data loads. 228 0xE4 Power-Off Retract Cycle The number of power-off cycles counted when encountering a retract event and the heads are loaded off the media. 250 0xFA Read Error Retry Rate The number of errors while reading from a disk. Crucial attribute for the count of TUs successfully recovered by RAIN (Redundant Array of Independent/Inexpensive Nodes). 178 0xD2 Used Reserved Block Count Samsung attribute. A 12-amp Everstart battery charger can also be adjusted for a lower trickle charge if needed and set to charge either a 6- or 12-volt battery. 184 0xB8 End-to-End error / IOEDC Count of parity errors in the data path to the media via the drive's cache RAM. With some Fujitsu drives, counts the link resets during a data transfer. 230 0xE6 GMR Head Amplitude or Drive Life Protection status The amplitude of thrashing or with solid-state drives an indication of the usage trajectory outpacing the life curve. For amperage, choose the amperage at which to charge the battery. Verify the type of battery in your vehicle. 235 0xEB Good Block Count and System (Free) Block Count Bytes 0-2 are good block count, and bytes 3-5 are the system (free) block out. 12 0x0C Power Cycle Count The number of times the hard drive has had power off and on cycles. Below is a full list and examples of the type of information a program with access to S.M.A.R.T can view. 170 0xAA Available Reserved Space Value of available reserved space of the initial reserved pace. Some companies may improperly refer to this intelligence as AI (artificial intelligence). 254 0xFE Free Fall Protection The number of free fall events detected. Note It is up to the viewer and the type of drive you're using to decide what S.M.A.R.T. attributes are shown. 231 0xE7 Life left or Temperature The approximate SSD life left. 180 0xB4 Unused Reserved Block Count Total Hewlett-Packard attribute. 207 0xCF Spin High Current The amount of surge current used to spin up the drive. 182 0xB6 Erase Fail Count Samsung attribute. 246 0xF6 Cumulative Host Write Sector Count Crucial attribute for the number of 512 Byte Sectors. 175 0xAF Power Loss Protection Failure Bytes 0-1 = Number of microseconds to discharge cap. Below is an example of the Storage Executive drive management utility from Crucial. This error indicates that the drive should be replaced. Updated: 07/06/2021 by Computer Hope SMART may refer to any of the following: 1. 191 0xBF G-sense Error Rate The number of errors from external induced shock or vibrations. 241 0xF1 Total LBAs Written The total count of LBAs written. 13 0xD0 Soft Read Error Rate Count of uncorrected errors reported to the operating system. Bytes 2-3 = Minutes since the last test. A value of 100 is a new drive, and 10 or less is an indication of the need for replacement.
